

Managed Email Security Services

Managed Email Security Services

For organizations that want Complete Managed Hosted Email Security

What is SaaS

- Software as a Service
- Installed on our Servers rather than your data center (Cloud)
- Managed from Cloud
- Cloud Email Protection
- Archiving in the Cloud
- Flat Subscription Pricing

Call Us Today!

Benefits of SaaS

- Easier to Manage
- Always Up To Date
- Lower TCO

At eSecurity Solutions, security is our only business. Since 2003, we have focused exclusively on products, services and managed services especially for business. We don't sleep until your data and business is secure and compliant.

Flexible SaaS Email Security Solutions to Protect your Critical Email

Email is Often the Gateway to Malicious Attacks

Email continues to be the primary communication method both in business and personally. Email security has evolved beyond the need for Spam control and simple viruses. Yet, Spam is now 75% of all email, and 1 in 200-250 emails are malicious.

Phishing threats are contained in 1 in 300 emails. Threats are contained in obfuscated links and attachments. Criminals leverage social engineering to elicit personal private information, and malicious code exploits new vulnerabilities contained in browsers,

applications, plug-ins and operating systems.

EMAIL SECURITY RISKS

- **Malware**
 - Attachments
 - Bad Links
- **Spam**
- **Phishing**
 - Private Information
- **Compliance**
 - Privacy
 - Archiving
 - Data Loss
- **100% Email Availability**

Regulation compliance and "best practices" continues to drive increased security as well. Protecting personal private data is a key requirement. DLP and encryption help protect this information. Archiving of emails is a requirement for any company who wants to protect themselves from lawsuits. FRCP civil suite legal guidelines can require any company to produce emails from up to 10 years ago.

Email Protection may be your Most Important Investment

With email the predominant productivity tool but also an enormous threat vehicle, it stands to reason that we must bring to bear the most sophisticated email security available. It may be time to upgrade your current solution to one that protects all areas of vulnerability.

SaaS versus On-Premise

Email security used to require on-premise installation and constant updates to keep protection up to date. When your email was down, employees were stuck with no ability to communicate. Things have changed, great security is now available from the cloud (SaaS) with all the benefits of, easier install, always up to date, and 100% email continuity even if your server goes down. Feature availability and robustness for SaaS is as good as on-premises except for very advanced features like DLP. Features like email continuity are only available with SaaS. Pricing is low, flat and with no up-front hardware or software costs. SaaS implementations also facilitate the delivery of managed security services, making it easier for customers to outsource the entire thing.

IT'S A DANGEROUS WORLD

- Spam is 75% of Email
- 42 Million Spam Emails per Day
- 1 in 200-250 Emails are Malicious
- 1 in 300 Email contains Phishing

Managed Email Security Services

MANAGED SERVICES

- Secure Policy Creation
- Secure Setup
- 24 x 7 Monitoring
- Alert Response
- Security Tuning
- Configuration Changes
- Maintenance & Updates
- Reports
- Support

BENEFITS

- Complete Enterprise Level Security
- Expert Management
- Ongoing Maintenance & Support
- No Headaches

So Many Choices for Email Security Features

When choosing a SaaS email protection suite, you can select from a complete list of enterprise features. Most are bundled in the core suites and include realtime anti-malware and anti-phishing protection using sender reputation checking.

Optional features include email encryption and email archiving. Archiving provides redundant offsite secure storage for up to 10 years and searchable e-discovery.

Regulation Compliance is supported with DLP, Encrypted email and email archiving.

Email will always be available with email continuity spooling offsite that kicks in when your ISP or email server temporarily goes down. Email is accessible via the Web or sent to your email server when service is restored.

DO YOU NEED THESE?

- Malware Prevention
- Email Reputation Checking
- Anti-Phishing
- Anti-Spam (In/Outbound)
- Compliance
 - Encrypted Mail & TLS
 - Data Loss Prevention
 - Email Archiving
- 100% Email Availability
- Cloud Infrastructure
- Managed Services w/24 x7
