Peace of mind from a single DRaaS solution providing onsite and offsite recovery of servers, PCs and Data

Can you Exist in a Digital World without your Digital Assets

Disasters of all kinds strike businesses without warning every day. Twenty two percent (22%) of businesses experienced more than one outage in the last six months. Most businesses are not prepared to have key servers, email, PCs and key data unavailable and can't even speculate on what an outage costs to their business. Twenty percent (20%) of businesses don't have a disaster recovery plan.

With business and equipment outages occurring at a frequent rate, to not invest in disaster recovery is gambling with your company's very existence.

Threats come from outside and inside factors, and businesses are increasingly dependent on digital products and services. Statistics show that businesses that are not able to recover quickly are likely to go out of business.

Out with the Old and In with the New

Tape Backup is a thing of the past. Other than very large archive storage, no business can afford the slow recovery time, the backup failure rates and the lack of quick access.

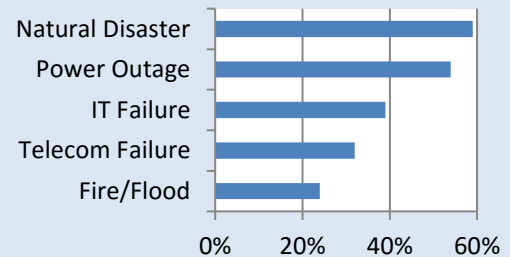

- 22% of businesses experienced more than one outage in the last six months.
- 20% of Businesses lack a Disaster Plan
- 37% don't know the impact of an outage
- 22% rarely if ever test their DR Plans

be restorable at a granular level as well as a complete data set.

What Preparations Should You Make

The first step in acquiring a solution is to plan your digital disaster recovery solution. Determine your maximum allowable downtime. How and where should your data be stored? Onsite and offsite is absolutely recommended. Do you want physical and virtual systems as well as data to be recovered? How much data do you have? Prioritize the criticality of different data stores and how quickly it needs to be restored. How fast will your data grow and how will that affect your recovery plans. Do you want to manage all of this or do you want an experienced partner such as eSecurity Solutions to manage your disaster recovery.

Top Disasters

Managed Data Disaster Recovery Service

RISKS

- Downtime Costs
SMBs \$12,500 / Day
 - Lost Sales
 - Lost Productivity
- 40% of SMBs go out of business if unable to recover quickly
- Impact to Shareholder Value

Finally a Solution that Does it All

eSecurity Solutions has a Disaster Recovery as a Service (DRaaS) solution designed to meet your needs. We provide a single scalable solution that offers both system (virtual and physical) plus data onsite/offsite backup and instant recovery. Whether you are a small business or a larger company, we can scale the solution to meet your needs.

Restore Granularity is no problem either, with the ability to restore entire data sets or systems or drill down and restore mail messages, SQL data or files and folders.

Managed Disaster Recovery as a Service (DRaaS)

eSecurity Solutions can provide you with a complete turnkey solution to your disaster recovery needs. We can handle the complete process from policy creation to installation, testing, maintenance and reporting. We will be there to manage your system and data recovery every step of the way. Call us, email or chat with a solution specialist to get the process started today.
