

One-Stop Cyber Security

Planning & Advisory | Security Audits | Managed Security | Products

Your Expert Security Partner

Providing All the Security You Need?

eSecurity Solutions' mission is to provide compliance-level security solutions to your business and to be your expert security partner. We do that by providing a full complement of services and products that will help you achieve your security goals.

This begins with GRC services to assess risk, audit compliance, define security gaps and prioritized solutions and provide ongoing services to keep you compliant. Then we can add complete 24x7 managed security Services and MDR. Lastly, we can provide the right customized security products to meet your goals and budget.

We help customers become regulation compliant, qualify for cyber insurance, or become best practices secure. Then we help you monitor, detect threats and respond so you stay secure.

Companies Continually Need to Improve Their Security

- Security attacks are ramping up, enabled by automated attack software.
- Small & medium business are suffering a disproportionate amount of the Automated software attacks (about 50% of attacks).
- Attacks continue to morph quickly to evade traditional prevention security. As a result, many attacks can only be discovered after an attack by using sophisticated monitoring solutions.
- Attackers look for the latest weakest link in security. Therefore, security must continuously be reassessed and improved.

Regulation Compliance Level Security is the New Minimum

1. Use of **security audits & risk assessments** to determine security gaps and to define prioritized solutions is always step one.
2. Security plans must be created that define prioritized security solutions and a security roadmap.
3. **Balanced use of preventative, detection (monitoring), and response solutions** to catch and act on threats and attacks. Preventative solutions will not stop all attacks. Monitoring solutions enable detection of attacks and incidence response plans define what to do when you detect attacks.
4. Use the **latest generation detection and response technology** to detect advanced threats that bypass prevention solutions. Examples include Endpoint Detection and Response (EDR) and monitored Security Information and Event Monitoring (SIEMs) to provide overall security & IT system monitoring, analysis, and correlation of attack results.

Extend Your Company's Expertise and Resources with Outsourced Security

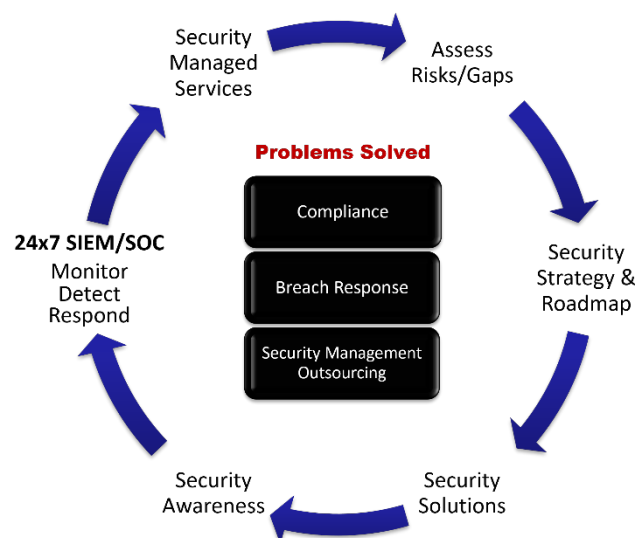

Third party security companies like eSecurity Solutions can provide expert configuration, management, monitoring, and incidence response. These companies are the right solution for companies that cannot or do not want to hire large security teams.

Solving the Entire Security Problem

Starting with GRC Services

Starting with [compliance audits](#), [gap analysis](#) & [security risk assessments](#), we can audit your security strategy and current controls and provide you with a prioritized list of vulnerabilities and required solutions. Our services are designed to meet your regulation compliance, cyber insurance and security objectives. We are fluent in all major security regulations such as HIPAA, NIST, PCI, banking regulations, and international standards such as ISO.

We can help you define your strategy and can even act as your Virtual CSO acting in whatever advisory capacity you require. We will recommend appropriate product solutions that match your security gaps and your budget.

What are Managed Security Solutions?

Managed security solutions provide companies with the expert resources to manage almost any control area of security. Included in managed services are policy definitions, policy and alert configuration, maintenance, monitoring, updates, and incidence response as it relates to the managed control.

Commonly managed solutions include firewalls, endpoint and EDR security, MFA, mail security, and most importantly, managed SIEMs. Providing a 24x7 security operation center (SoC) using a SIEM enables ongoing management, monitoring and response.

Why Companies Need Managed Security?

Companies have many reasons why they use outsourced managed security services. They include:

- **Global shortage of cyber security professionals** makes it impossible to hire, train and retain the right staff.
- **Lower costs** – Who can really afford the cost of 24x7 staffing, redundant resources, and superior expertise.
- **Higher level of expertise** for regulations, security control and product management
- **Redundancy (redundant resources)** trained on security, compliance, and the products to be managed.
- **24x7 management, monitoring, and incidence response**
- **Active Management is required by Security regulations** and security must be continually adjusted.
- **Regulations require security monitoring** which cannot be completed properly without the right monitoring solutions and a team to actively monitor your systems and security. The only way to prevent today's attacks is to actively monitor your security and systems. Managed security can provide 24x7 monitoring and response.

While it may seem cheaper to run with an undertrained and understaffed 8x5 staff, in the long run what is the cost of the next ransomware, CEO fraud, or credential theft caused breach of your key data.

Why Use Our Managed Security Services?

Managed Detection and Response (MDR)

- Manage
- 24x7 Monitor
- Detect
- Incidence Response
- Threat Containment
- **Integrated Security Monitoring and Response Solution**
SOC+SOEM+EDR+Firewalls

To offload the security management burden by providing

- Expert level compliance, security controls and security product knowledge
- 24x7 management & monitoring
- Knowledge of security regulations

We Provide a Complete Suite of Managed Security Service Solutions

- **Managed Detection & Response** - Complete 24x7 monitoring of security and IT systems using a Security Information and Event Monitoring SIEM. Providing management, detection, response, and threat containment using a world class SIEM.
- **24x7 Security Operation Center (SoC)**
- **Management of all key security controls:**
 - ✓ Firewalls
 - ✓ Endpoints including EDR
 - ✓ Multifactor authentication (MFA)
 - ✓ Email Security
 - ✓ Cloud Security, Zero Trust, Dark Web

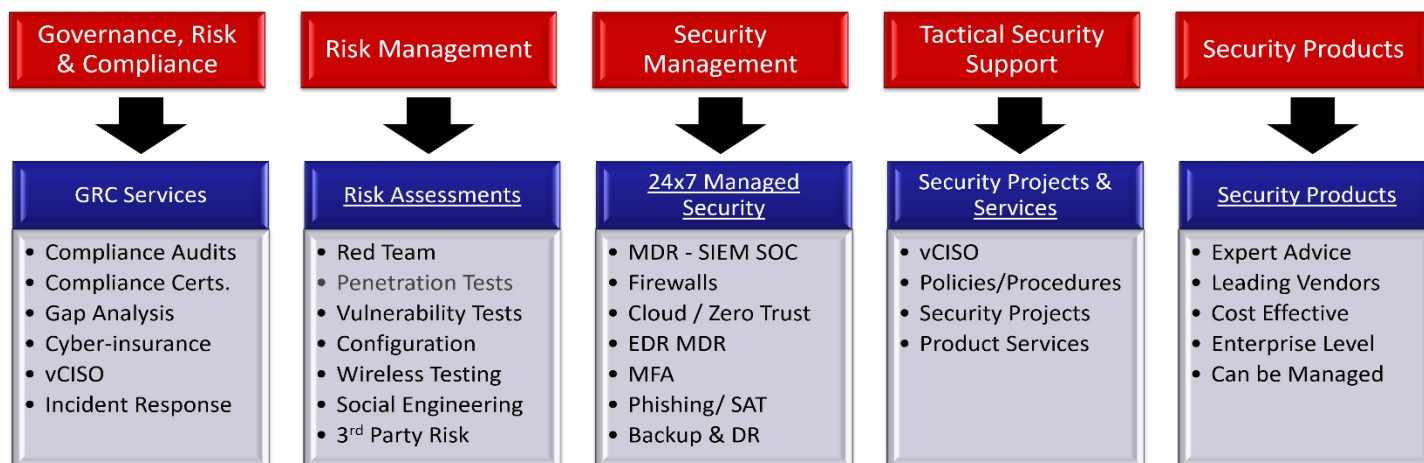

Expert Vendor Certified Security Product Knowledge

We have worked with leading security product vendors since 2003 to intimately learn their security products from the inside out. So, managing them is second nature for us.

Broad Security Solutions

The breadth of solutions we provide leverages intimate knowledge of security best practices and regulations. We provide governance services, compliance level security risk assessments, managed security, and a broad range of security products and the ability to provide services related to those products.

Some of Our Security Product Partners

We partner with the top security vendors in the industry. We provide managed services for many of those products. Contact us to discuss the right solutions for you or to get a risk assessment to define your security gaps.

Why Do Customers Work with eSecurity Solutions?

About Us

20 Years of Security Focus

Certified Information
System Auditors

Certified Ethical Hackers

Compliance Focused

All Areas of Security

- ✓ **Nearly 20 years focused on cyber security for small, medium, and larger companies.**
 - Long experience working with mid-sized customers providing right-sized solutions.
- ✓ **Thousands of satisfied customers – all industries, all sizes**
 - **Complete security solutions for businesses, addressing all phases of the security risk management cycle** Including:
 - Compliance Level Risk Assessments
 - Expert Security Managed Services
 - Right sized security products from leading security companies
- ✓ **Cost effective solutions –** We provide enterprise level security to all our customers regardless of what size their company is.

Compliance Solutions

Broad Security Compliance Level Solutions

We understand regulatory requirements and how they impact organizations and have designed our solutions to help ease the burden of compliance. We have been providing security regulation solutions since 2003. We assist your company become or stay regulation compliant by providing risk assessments, defining gaps, recommending solutions, defining security strategies, and helping implement plans.

Your IT staff are already under a lot of pressure, so keeping up with regulations and meeting strict compliance requirements can be a taxing and burdensome job. We can be your chief compliance officer or just assist you as a 3rd party member of your team. A 3rd party view of your security may be just what you need.
